Total Zone's Electronic Odor Control System Will Eliminate:

- Cigar & Cigarette Odors
- Pet Odors
- Must & Mildew Odors
- Cooking Odors
- Offensive Body Odors
- Germs, Bacteria & Viruses
- Painting Odors
- New Carpet Odors
- Smelly Shoe Odors
- Wasty, Stale Odors
- Beauty Shop Odors
- Gym Odors
- Garbage / Dumpster Odors
- Bathroom Odors
- Etc... Etc... Etc...
What is ozone & how does it work?
Ozone is a naturally occurring substance used in nature that we cannot live without. Ozone is an activated form of oxygen (O3) with three atoms where regular oxygen has two. Ozone in the upper atmosphere filters out harmful rays from the sun with which all life on earth would cease to exist. Ozone in the home serves to produce lightening to the sanitizers. I'm sure you have experienced the freshness in the air after a storm. Ozone is very applicable and free at approximately 10 feet. To activate the ozone, you must have a gas or electrical discharging point of ozone. We cannot have an ozone generator without gas or electrical discharging. The ozone generator inactivates the bacteria, virus, mold, mildew, fungi in the air and on the surfaces. Ozone inactivates bacteria and viruses in the air to convert them into another substance. In the case of water, it converts a lethal inactivating substance into a non-lethal substance and enables us to be able to inhale, drink, or use. Once ozone has done its job it pulls the ozone back to oxygen. Ozone also deactivates and destroys mold, mildew, fungi, and coming down to the närish.
